

To FCC, Please reject the NAB's petition 04-160. XM is offering a valuable service with their traffic and weather updates that I am paying for. I have a private contract with them to provide this service to me and no other company or organization needs to be getting involved with what type of content they offer me. Furthermore, the weather and traffic services in question have already been of value with my driving safety as recently I needed that type of information and my AM/FM radio was unable to get reception. My XM radio provided me with the information I needed to make a safer driving decision. Please keep the private market free from outside influence.

Sincerely,

Brye McBee
